

## CLAIM AMENDMENTS

### **Listing of Claims:**

#### **CLAIMS**

1. (currently amended) A method for maintaining privacy for transactions ~~performable by~~  
comprising employing a user device (20) having a security module (22) with a privacy  
certification authority computer (30) and a verification computer (40), the verification computer  
(40) having obtained public keys from the privacy certification authority computer (30) and from  
an issuer (10) that provides attestation of the security module (22), the method further comprising  
the steps of:

- receiving a first and second set of attestation-signature values (~~DAA1, DAA2~~), the first set of  
attestation-signature values (~~DAA1~~) being generated by the user device (20) using first  
attestation values (~~AV1~~) obtained from the issuer (10) and the second set of attestation-signature  
values (~~DAA2~~) being generated by the user device (20) using second attestation values (~~AV2~~)  
obtained from the privacy certification authority computer (30);
- checking the validity of the first set of attestation-signature values (~~DAA1~~) with the public key  
of the issuer (10);
- checking the validity of the second set of attestation-signature values (~~DAA2~~) with the public  
key of the privacy certification authority computer (30); and
- verifying whether or not the ~~two~~ first and second sets of attestation-signature values (~~DAA1,~~  
~~DAA2~~) relate to the user device (20).

2. (currently amended) The method according to claim 1, wherein the step of verifying  
comprises the step of: verifying that a first value is derived from a base value, comprised in the  
first set of attestation-signature values (~~DAA1~~), and identical to a second value that is derived  
from said base value and is comprised in the second set of attestation-signature values (~~DAA2~~).

1.

1 3. (currently amended) The method according to claim 1, wherein the step of verifying  
2 comprises the step of: verifying a proof that the ~~two~~ first and second attestation-signature values  
3 (~~DAA1, DAA2~~) are based on the first and second attestation values (~~AV1, AV2~~) that are derived  
4 from at least one common value (~~t~~).  
5 2.

6 4. (original) The method according to claim 2, wherein the base value is different each time the  
7 method is applied.

8 5. (currently amended) The method according to claim 3, wherein the common value (~~t~~) is  
9 derived from an endorsement key (~~EK~~) that is related to the security module (~~22~~).

10 6. (currently amended) A method for maintaining privacy for transactions ~~performable by~~  
11 comprising employing a user device (20) having a security module (22) with a privacy  
12 certification authority computer (30) and a verification computer (40), the privacy certification  
13 authority computer (30) having obtained a public key from an issuer (10) that provides attestation  
14 of the security module (22); the method further comprising the steps of:  
15 - receiving an initial set of attestation-signature values (DAA1') from the user device (20), the  
16 initial set of attestation-signature values (DAA1') being generated by the user device (20) using  
17 first attestation values (~~AV1~~) obtained from the issuer (10);  
18 - checking the validity of the initial set of attestation-signature values (~~DAA1~~) with the public  
19 key of the issuer (10);  
20 - responsive to the checking step issuing second attestation values (~~AV2~~) that relate to the initial  
21 set of attestation-signature values (DAA1'); and  
22 - providing the second attestation values (~~AV2~~) to the user device (20), a second set of  
23 attestation-signature values (~~DAA2~~) being derivable from the second attestation values (~~AV2~~),  
24 wherein it is verifiable that a first set of attestation-signature values (~~DAA1~~) and the second set  
25 of attestation-signature values (~~DAA2~~) relate to the user device (20), the first set of  
26 attestation-signature values (~~DAA1~~) is generatable by the user device (20) using first attestation  
27 values (~~AV1~~) obtained from the issuer (10).

1 7. (currently amended) The method according to claim 6, wherein the step of issuing the second  
2 attestation values (AV2) further comprises the step of: receiving a request value from the user  
3 device (20) and verifying whether the request value relates to the initial set of  
4 attestation-signature values (DAA1').

5 8. (currently amended) A method for comprising maintaining privacy for transactions  
6 performable by a user device (20) having a security module (22) with a privacy certification  
7 authority computer (30) and an verification computer (40), the user device (20) having obtained  
8 first attestation values (AV1) from an issuer (10) and second attestation values (AV2) from the  
9 privacy certification authority computer (30), the method step of maintaining comprising the  
10 steps of:  
11 - generating a first set of attestation-signature values (DAA1) by using the first attestation values  
12 (AV1) and a second set of attestation-signature values (DAA2) by using the second attestation  
13 values (AV2); and  
14 - sending the first and second set of attestation-signature values (DAA1, DAA2) to the  
15 verification computer (40),  
16 wherein the verification computer (40) is able to check the validity of the first set of  
17 attestation-signature values (DAA1) with an issuer public key (PK<sub>i</sub>) of the issuer (10), the  
18 validity of the second set of attestation-signature values (DAA2) with an authority public key  
19 (PK<sub>PCA</sub>) of the privacy certification authority computer (30), and  
20 to verify that the two first and second sets of attestation-signature values (DAA1, DAA2) relate  
21 to the user device (20).

22 9. (currently amended) The method according to claim 8, wherein the step of generating  
23 comprises using an endorsement key (EK) that is related to the security module (22).

24 10. (currently amended) A computer program element comprising program code means for  
25 performing the method of any one of the claims 1 to 9 claim 1 when said program is run on a  
26 computer.

11. (currently amended) A computer program product stored on a computer usable medium, comprising computer readable program means for causing a computer to perform the method according to ~~any one of the claims 1 to 9~~ claim 1.

12. (currently amended) A system for maintaining privacy while computers performing transactions comprising:

an issuer ~~(10)~~ providing an issuer public key (PK<sub>I</sub>);  
a user device ~~(20)~~ having a security module ~~(22)~~ for generating a first set of attestation-signature values ~~(DAA1)~~;  
a privacy certification authority computer ~~(30)~~ for providing an authority public key (PK<sub>PCA</sub>) and issuing second attestation values ~~(AV2)~~; and  
a verification computer ~~(40)~~ for checking the validity of the first set of attestation-signature values ~~(DAA1)~~ with the issuer public key (PK<sub>I</sub>) and the validity of a second set of attestation-signature values ~~(DAA2)~~ with the authority public key (PK<sub>PCA</sub>), the second set of attestation-signature values ~~(DAA2)~~ being derivable by the user device ~~(20)~~ from the second attestation values ~~(AV2)~~,  
wherein it is verifiable that the ~~two~~ first and second sets of attestation-signature values ~~(DAA1, DAA2)~~ relate to the user device ~~(20)~~.

13. (new) An article of manufacture comprising a computer usable medium having computer readable program code means embodied therein for causing maintenance of privacy for transactions, the computer readable program code means in said article of manufacture comprising computer readable program code means for causing a computer to effect the steps of claim 6.

14. (new) A program storage device readable by machine, tangibly embodying a program of instructions executable by the machine to perform method steps for maintaining privacy for transactions, said method steps comprising the steps of claim 6.

1 15. (new) An article of manufacture comprising a computer usable medium having computer  
2 readable program code means embodied therein for causing maintenance of privacy for  
3 transactions, the computer readable program code means in said article of manufacture  
4 comprising computer readable program code means for causing a computer to effect the steps of  
5 claim 8.

6 16. (new) A program storage device readable by machine, tangibly embodying a program of  
7 instructions executable by the machine to perform method steps for maintaining privacy for  
8 transactions, said method steps comprising the steps of claim 8.

9 17. (new) A computer program product comprising a computer usable medium having computer  
10 readable program code means embodied therein for causing maintenance of privacy for  
11 transactions, the computer readable program code means in said computer program product  
12 comprising computer readable program code means for causing a computer to effect the  
13 functions of claim 12.

14 18. (new) The method according to claim 1,

15 wherein the step of verifying comprises verifying that a first value is derived from a base value,  
16 comprised in the first set of attestation-signature values, and identical to a second value that is  
17 derived from said base value and is comprised in the second set of attestation-signature values;

18 wherein the step of verifying comprises verifying a proof that the first and second  
19 attestation-signature values are based on the first and second attestation values that are derived  
20 from at least one common value;

21 wherein the base value is different each time the method is applied; and

22 wherein the common value is derived from an endorsement key that is related to the security  
23 module.

1 19. (new) An article of manufacture comprising a computer usable medium having computer  
2 readable program code means embodied therein for causing maintenance of privacy for  
3 transactions, the computer readable program code means in said article of manufacture  
4 comprising computer readable program code means for causing a computer to effect the steps of  
5 claim 18.

6 20. (new) A program storage device readable by machine, tangibly embodying a program of  
7 instructions executable by the machine to perform method steps for maintaining privacy for  
8 transactions, said method steps comprising the steps of claim 18.
